

### ICA 7 Implementations

- I added a language for the HTML tags to say <html lang="en"> for english\
- I made sure every image had an alt text
- I added a link in my HTML Head to make my big picture of myself load faster on the index.html page and made it so other images have loading="lazy" for lazy loading

### TA Improvements

- I changed my color palette so the colors were more saturated and a bit easier on the user's eyes
- I added separation to the different sections of my valorant artifacts page by adding <hr> tags so the sections didn't merge together when in mobile view
- I deleted my resume image from my homepage and moved it to my contact me section and just added the button to access my pdf.
